

Advantel Networks Environmental Initiatives: Go Green

advantelnetworks

Advantel Networks is committed to protecting our environment.

Advantel Networks is committed to protecting our environment. We believe in helping save our planet through "Green" initiatives and providing products and services that reduce costs and your carbon footprint. Therefore, we have established a comprehensive sustainability program for both our employees and our customers.

In conjunction with our best-in-class technology partners, we strive to provide ways to help customers save electrical energy consumption, thus maximizing power and efficiency. The products we purchase come only from certified renewable energy sources, providing the following benefits for your organization:

- Save up to 45% on your energy costs.
- Help reduce summer electricity usage.
- Extend usage of your UPS system by reducing the drain from your communications assets.
- Speed up your network and offer your organization greater network bandwidth by upgrading phones and network infrastructure to support Gigabit Ethernet.

As part of our dedication to promoting sustainable business practices, we have replaced our network switches, telephony and virtualized all applications. We have also implemented several environmental friendly initiatives, including:

- Recycling all bottles, plastic and aluminum

- Utilize printer paper and supplies made only with the maximum amount of recycle materials available
- Provide recycle bins throughout our offices for collection
- Replaced all Styrofoam products with recyclable paper goods
- Provide dedicated bins for trash collection to support city-wide recycling programs
- Require all company PCs and Laptops be in hibernate mode when not being actively used
- Use LED or similar low voltage lighting throughout all our office locations
- Implement Paperless communication by providing electronic company documentation to our customers
- All Advantel Networks office locations are conveniently located near public transportation stations

In addition, Advantel Networks also maintains a fleet of company cars that are all fuel-efficient, averaging 38 miles per gallon, exceeding the Government Fuel Efficiency standard.

Preserving our environment is important to our business, and we will continue to strive in creating sustainable changes that make a difference. For more information on Advantel Networks, please log onto our website at www.Advantel.com.

Services Overview

Implementation Services

Advantel Networks knowledgeable, certified professionals will design your solution to both fit your budget and future needs.
